

VOLTA FINANCE

Limited

November Monthly Report At 30 November 2015

By obtaining access to and reviewing this monthly report, you acknowledge and agree to be bound by the following:

This monthly report does not constitute or form part of any offer or invitation to sell or issue, or any solicitation of any offer to purchase or subscribe for, any shares or other securities of Volta Finance Limited (the "Company") whose portfolio is managed by AXA Investment Managers Paris (the "Investment Manager"), or securities of any other entity (together, the "Securities"). Nor shall this monthly report or any part of it nor the fact of its distribution or publication (on the Company's website or otherwise) form the basis of, or be relied on in connection with, any contract or investment decision in relation to the Securities. This monthly report does not constitute a recommendation regarding the Securities. The information contained herein is for information purposes only, does not purport to contain all the information that may be required to evaluate the Company or any other entity or their respective financial positions.

This monthly report speaks only as of its date and neither the Company nor the Investment Manager is under any obligation to update the information contained herein. Certain information and estimates contained herein are originated by or derived from third parties and therefore the accuracy and completeness of such information and estimates has not been verified. It should also be noted that the financial information contained herein has not been audited. No representation or warranty whatsoever, whether express or implied, is given by or on behalf of the Company, the Investment Manager, their affiliates, or their respective directors, officers or employees or any other person as to (a) the accuracy or completeness of the information or (b) the opinions contained in this monthly report. None of the Company, the Investment Manager, any of their affiliates, or their respective directors, officers or employees or any other person accepts any liability whatsoever for any such information or opinions. Nothing contained herein shall be relied upon as a promise or representation whether as to past or future performance of the Company, any other entity, any Securities or any asset class in the Company's portfolio. No statement in this monthly report is intended to be nor may be construed as a profit forecast and there can be no assurance that the assumptions described herein, the returns and targets (including without limitation target portfolio composition) indicated herein will be achieved.

The valuation of financial assets can vary significantly from the prices that the Company could obtain if it sought to liquidate the positions due to market conditions and general economic environment. Such valuations do not constitute a fairness or similar opinion and should not be regarded as such. They follow the valuation policy of the Company as adapted from time to time in the best interests of the shareholders, taking into account the evolutions and the illiquidity of financial markets.

Comment

Dear Shareholders and Investors,

PERFORMANCE

At the end of November 2015, the Estimated NAV of Volta Finance Limited (the “Company”, “Volta Finance” or “Volta”) was €296.7m or €8.13 per share, an increase of €0.10 per share, or +1.2%, since the end of October 2015.

The YTD NAV performance for the 2015 calendar year, including the April dividend paid, stood at +10.0% as at the end of November.

The GAV stood at €344.4m at the end of November.

On 14 December 2015, the Company paid a further dividend of 31 cents per share, to shareholders on the register on 4 December 2015. On an ex-dividend basis, the Estimated NAV at 30 November 2015 would have been €7.82 per share.

Volta’s share price has seen some weakness in recent weeks, commencing in late November and continuing into December. At the time of writing, the share price is trading at around a 19% discount to this ex-dividend Estimated NAV. This widening discount probably reflects the recent weakness and stress in the US loan market, the high yield markets and the broader credit markets.

We would note that valuations at the end of November already reflected a significant level of this stress. For example, as at the end of November:

- Volta’s USD CLO Equity tranches were priced, on average, at 55.1% of par (significantly below the 75.5% average price recorded at the end of June 2015). These assets were valued at €45.1m at the end of November and generated cash flows of €2.9m in the last 3 months (September/October/November), implying an annualised yield in excess of 26% of the end of November valuation.
- Volta’s USD CLO Debt tranches are priced, on average, at 88.5% of par (compared with 95.4% at the end of June 2015).

The view of AXA IM, is that the current stress in the US loan and other credit markets reflects the expectation of an increase in default rates in the US loan market from prevailing levels, which are far below the historical average, to be closer to historical average levels by end 2016 - mid 2017. This potential turn in the credit markets seems to have taken some participants by surprise. However, this has been AXA’s central scenario for some time. Accordingly the portfolio has been orientated to retain a significant portion of 1.0 CLO tranches (which have less sensitivity to episodes of stress such as that currently being experienced), to be very selective in our exposure to CLO Equity tranches and to increase the exposure to European assets.

The key question from here is whether this expected increase in default rates is the sign of the turn of the present credit cycle, with broad implications, or the consequence of a few sectorial issues, such as the energy and materials crisis and the difficulties for some retailers to adapt to the on-line consumerism. Our current view is that the latter explanation is the more likely and that current low prices in the US loan market offer good investment opportunities.

Comment (continued)

Although we expect the US loan market to see an increase of default rates to reach, or even slightly exceed, the historical average level by the end of 2017, this should not have, in our present opinion, a significant impact on Volta's expected CLO cash flows.

MARKET REVIEW AND PORTFOLIO ACTIVITY

In November, credit markets were shaky again, with a negative performance of both corporate credit bonds and the US and the European loan markets.

On average during the last 4 months, declines in prices were roughly compensated by cash flows received. This month again, mark-to-market variations* of Volta's asset classes were neither significantly down nor up: -1.4% for Synthetic Corporate Credit deals; -0.9% for CLO Equity tranches; +0.3% for CLO Debt tranches, 0.0% for Cash Corporate Credit deals; and, +0.6% for ABS. During the month, the US Dollar appreciated by 4.2% against the Euro, contributing positively to the overall performance. However, following the recent strength in the Dollar against the Euro we increased our currency hedging and the Company's exposure to the Dollar has been reduced somewhat standing at 36.5% of the Estimated NAV as at the end of November.

In November, Volta received the equivalent of €1.8m in interest and coupons (non-Euro amounts translated into Euro using end-of-month cross currency rates) bringing the total cash amount received in terms of interest and coupons during the last six months to €13.3m. Cash or cash equivalent instruments, at the end of November was at €21.6m. Accounting for the December dividend payment, Volta could be considered as having approximately €6m available to deploy.

In November Volta did not execute any trades in anticipation of better opportunities in due course. We anticipate that we will continue to sell part of the 1.0 tranches and purchase more recent transactions at deeper discount margins.

Overall we continue to see opportunities in several structured credit sectors including mezzanine or equity tranches of CLOs, RMBS tranches as well as tranches of Cash or Synthetic Corporate Credit portfolios.

** "Mark-to-market variation" is calculated as the Dietz-performance of the assets in each bucket, taking into account the Mark-to-Market of the assets at month-end, payments received from the assets over the period, and ignoring changes in cross currency rates Nevertheless, some residual currency effects could impact the aggregate value of the portfolio when aggregating each bucket.*

About Volta Finance Ltd

Volta Finance Limited is incorporated in Guernsey under The Companies (Guernsey) Law, 2008 (as amended) and listed on Euronext Amsterdam and the London Stock Exchange's Main Market for listed securities. Volta's home member state for the purposes of the EU Transparency Directive is the Netherlands. As such, Volta is subject to regulation and supervision by the AFM, being the regulator for financial markets in the Netherlands.

Volta's investment objectives are to preserve capital and to provide a stable stream of income to its shareholders through dividends. For this purpose, it pursues a multi-asset investment strategy targeting various underlying assets. The assets that the Company may invest in either directly or indirectly include, but are not limited to: corporate credits; sovereign and quasi-sovereign debt; residential mortgage loans; automobile loans. Volta Finance Limited's basic approach to its underlying assets is through vehicles and arrangements that provide leveraged exposure to some of those underlying assets. Volta Finance Limited has appointed AXA Investment Managers Paris, an investment management company with a division specialised in structured credit, for the investment management of all its assets.

Synthetic Corporate Credit

This asset class regroups the Company investments in securities issued by collateralised swap obligations ("CSO") as well as bank balance-sheet transactions. Through this asset class, the Company aim to get an exposure to investment grade, sub-investment grade or unrated credits. The vast majority of these credit exposures are investment grade corporate credit exposures mainly through synthetic arrangements such as Credit Default Swaps ("CDS").

This asset class is split depending on the subordination to default of the securities. The equity positions have no subordination to default but receive a high cash-on cash payment; the debt positions benefit from subordination to default and receive a lower coupon payment.

Through a bank balance-sheet transaction, the Company aim to get an equity or mezzanine exposure to a specific core business of a bank. They are structured through synthetic arrangements, such as CDS, Total Return Swap or Credit Linked Note and are often private transactions.

CLO

This asset class regroups the Company investments in securities issued by actively managed Collateralized Loan Obligations (CLO). This asset class is split based on the risk position within the CLO capital structure (ie between equity and mezzanine debt positions) and on the geographical main exposures of the underlying portfolio (ie US or European senior secured loans).

Cash Corporate Credit

This asset class offers a direct exposure to corporate credit portfolios (either investment grade, high yield or unrated). It currently encompasses an unlevered fund of leverage loans, a small and medium enterprise CLO equity tranche and an emerging market CDO debt tranche offering a cash exposure to a portfolio of mainly emerging market corporates.

ABS

This asset class regroups the Company investments in securities issued by structures for which payments depends on residential mortgage loans. This asset class is split based on the riskiness of the positions (ie between Residual Interest and debt tranches)
